

India's Agricultural Crop Production Analysis.

CHAPTER – 01 INTRODUCTION

1.1 – Project Overview

The India's Agricultural Crop Production Analysis project focuses on analyzing agricultural crop production data across different states and years using data visualization techniques. The project aims to identify production trends, compare crop performance, evaluate yield patterns, and provide meaningful insights that support better agricultural planning and decision-making.

Collect Data

- Gather agricultural crop production data from reliable sources.

Clean the Data

- Remove missing values, duplicates, and incorrect records.

Process the Data

- Organize data by state, crop, season, year, production, and yield.

Import into Tableau

- Load the prepared dataset into Tableau for analysis.

Create Visualizations

- Develop KPI tiles, maps, bar charts, line charts, and dashboards.

Analyze Trends

- Identify production patterns, top-performing crops, and regional variations.

Generate Insights

- Draw conclusions and provide recommendations for agricultural improvement.

Publish Dashboard

- Share the interactive dashboard for decision-making and reporting purposes
