CHAPTER – III REQUIREMENT ANALYSIS

3.1 – Customer Journey Map

1. Awareness

- Users learn about agricultural production through government reports, news, websites, and dashboards.
- They need reliable and easy-to-access crop production information.
- Data is often scattered across multiple sources, making it difficult to understand.
- A centralized Tableau dashboard provides a single platform for agricultural insights and visual summaries.

2. Exploration

- Users explore crop-wise, state-wise, and seasonal production data.
- They require detailed information about production, cultivated area, and yield.
- Comparing large datasets manually is time-consuming and difficult.
- Interactive filters, maps, and charts simplify data exploration and comparison.

3. Analysis

- Users analyze production trends across different years and states.
- They need accurate historical data and visual trend analysis.
- Traditional reports lack predictive insights and interactive analysis.
- KPIs, trend lines, and forecasting features support better understanding and decision-making.

India's Agricultural Crop Production Analysis.

4. Decision Making

- Farmers, researchers, and policymakers use insights for planning and resource allocation.
- They expect data-driven recommendations for crop selection and agricultural policies.
- Climate changes and market fluctuations create uncertainty in decision-making.
- Integrating weather, irrigation, and market price data improves planning and strategy development.

5. Implementation

- Users apply dashboard insights to improve farming practices and agricultural planning.
- Their goal is to increase productivity and optimize resource utilization.
- Limited awareness of modern technologies affects implementation.
- Smart farming techniques and digital agriculture solutions help improve agricultural efficiency.

6. Evaluation

- Users review crop performance and compare actual results with expected outcomes.
- They monitor long-term agricultural performance and productivity.
- Tracking production changes over multiple years can be challenging.
- Yearly performance dashboards and predictive analytics support continuous improvement and future planning.
