

India's Agricultural Crop Production Analysis.

TEAM ID	SWTID-2026-8827
PROJECT TITLE	India's Agricultural Crop Production Analysis.
MAX MARKS	1 MARK

CHAPTER – V

PROJECT PLANNING AND SCHEDULING

5.1 – Project Milestones & Tasks

1. Data Collection & Extraction

The first step is to collect agricultural crop production data from reliable government or open-source datasets. The data is imported into Tableau from CSV, Excel, or database files, and checked for completeness and accuracy.

2. Data Preparation

The collected data is cleaned by removing missing values and duplicate records. Column names and data types are corrected, calculated fields are created, and unnecessary records are filtered to prepare a structured dataset.

3. Data Visualization

Different charts such as bar charts, line charts, maps, pie charts, and treemaps are created to analyze crop production by state, year, season, and crop type. KPI indicators for Total Production and Total Yield are also developed.

4. Dashboard Development

All visualizations are combined into a single interactive dashboard. Filters for Year, State, Crop, and Season are added to help users explore the data easily through a simple and attractive interface.

5. Story Creation

Tableau Story Points are used to present the analysis in a logical sequence. The story explains crop production trends, yield variations, and important insights using visual narratives.

6. Performance Testing

The dashboard is tested for speed and accuracy. Unused fields and worksheets are removed, filters are checked, and calculations are validated to ensure smooth performance.

7. Web Integration

The completed dashboard is published on Tableau Public or Tableau Server. An embed code is generated and integrated into a website or project portal so that users can access it online.

8. Project Demonstration & Documentation

Finally, the project is presented by explaining its objectives, methodology, dashboard features, and key findings. A complete project report with screenshots, analysis, and conclusions is prepared for documentation.
